

HackerOne Proof of Compliance

Firi AS engaged HackerOne to provide the platform that hosted Firi AS's Bug Bounty Program ("BBP") which included 7 assets within scope of the BBP's Policy Agreement ("Policy") (Table 1). These assets were in Firi AS 's BBP during the period August 2nd, 2024 to May 19th, 2026 ("Applicable Period"). This report is a confirmation of compliance with multiple international security standards.

During the Applicable Period, 141 reports were submitted to the BBP, of which 22 valid vulnerabilities were identified after triage. 20 of these reports were resolved. 1 vulnerability was found to have a Common Vulnerability Scoring System ("CVSS") severity rating of 7.0 or higher. These vulnerabilities represent the greatest risk to Firi AS and should be prioritized for remediation. Table 1 displays the in-scope assets and breakdown of findings by severity per asset.
